## 1. Project Description

BlogApp is a full-stack web application designed for creating, managing, and reading blog posts. It offers a seamless experience for both content creators and readers, with essential features for a modern blogging platform.

## 2. Technology Stack

Our social media web application is developed using the following technologies:

- Backend: Java (Spring Boot)
- Frontend: Angular.js, Typescript
- Database: MySQL
- Project Management Tools: Jira, Azure DevOps
- Version Control: GitLab

The development process and task tracking are managed using **Jira**. The project board includes all relevant issues, tasks, and development stages to ensure an organized workflow and transparency among team members.

## 3. Application Architecture

The application follows a three-tier architecture:

- Frontend (Client-Side): Built with Angular.js, responsible for displaying the user interface and handling user interactions.
- Backend (Server-Side): Developed in Java using Spring Boot framework, providing RESTful APIs for business logic.
- Database Layer: MySQL is used for persistent data storage and retrieval.

## 4. Application Functionality

The social media platform includes the following core functionalities:

- User authentication via Google Firebase
- Creating, commenting and liking posts
- Adding hashtags to categorize content
- Viewing a feed of posts from all users
- Searching posts by hashtag or keyword

Future enhancements may include saved posts to the created folder and media uploads set by default through API.

## 5. User Interface

The UI is built using Angular.js and TypeScript, focusing on simplicity and responsiveness. Key features include:

- Clean and intuitive navigation bar
- Post creation form with hashtag input
- Comment sections below each post
- Dynamic feed that updates with new posts

## 6. Summary

This project is a collaborative effort aimed at developing a full-featured social media platform with modern web technologies.

It integrates frontend and backend seamlessly while Jira and Azure DevOps.

The use of GitLab ensures streamlined version control and collaboration.
